

NEW PROVIDENCE SCHOOL DISTRICT

PROGRAM OF STUDIES ~ FOURTH GRADE

INTEGRATED LANGUAGE ARTS

The fourth grade language arts program follows a balanced literacy framework that aligns with the New Jersey Student Learning Standards and assessments. It contains all of the components necessary to develop lifelong literacy. These components include word study, Reader's Workshop, and Writer's Workshop.

Word study focuses on word spelling and meaning. Through direct instruction and hands-on sorting activities, students learn about spelling patterns, morphemes, and grade level appropriate spelling generalizations.

Reader's Workshop is based on reading research and develops essential reading skills, while fostering a love of reading. At the intermediate level, students read and learn about a variety of genres, including full-length trade books and nonfiction texts. Students learn and grow through various instructional contexts including teacher modeling, mini-lessons, small group instruction, book clubs, partnerships, and independent reading. Attention is given to each student's level of reading development while guiding him/her along the pathway to further growth as a strategic reader.

Writer's Workshop is similar to Reader's Workshop in many ways. This instructional model includes the following:

- Teacher modeling of his/her thought process to demonstrate the writing process
- Use of mentor text to illustrate particular elements of writing
- Regular and sustained periods of time for writing
- Student choice and responsibility in using strategies needed to become independent, lifelong writers
- Student opportunity to reflect upon writing and to discuss their growth with others
- Practical application of grammar rules

MATHEMATICS

The mathematics program in fourth grade is designed to actively engage students in a variety of activities and explorations that foster and develop understanding of fluency with multi-digit multiplication and division, understanding of fraction equivalence and operations, and further analysis of geometric shapes. In fourth grade, instructional time focuses on the following areas:

Develop fluency with multiplication and division

- ✓ Students understand place value up to 1,000,000, and apply that knowledge to multi-digit multiplication. With an emphasis on the Distributive Property, students accurately apply appropriate methods to estimate products and to explain why procedures work based on place value and number properties. Similar methods are developed for accurate procedures to find quotients involving multi-digit dividends. Students also interpret remainders based on the context of the given problem.

Develop understanding of fraction equivalence and fraction operations

- ✓ Students develop methods to recognize when two fractions can be equal. By extending the

meaning of unit fractions and their composition and decomposition, students investigate multiplication of a fraction by a whole number. Decimal notation for fractions is also explored.

Analyze shapes

- ✓ Students describe, analyze, compare, and classify two-dimensional shapes. They draw and identify lines and angles. Problems involving measurement and conversion of measurements from a larger unit to a smaller unit are solved.

The curriculum for this course includes 21st Century Skills that promote the use of innovative learning strategies by integrating supportive technologies, performance tasks, and higher order thinking skills as well as the integration of global perspectives and financial literacy.

The Mathematics curriculum is aligned with the New Jersey Student Learning Standards for Mathematics.

TECHNOLOGY LITERACY

The K-6 technology program provides an important foundation for elementary students. The program is comprehensive and interdisciplinary, addressing major themes within the curriculum. Each elementary school has a full time technology specialist teacher. These technology specialists provide curriculum development, instruction, professional development, and technical support in their respective schools.

Elementary students engage in curriculum-related technology activities designed by their classroom teacher, technology specialist, and/or library media specialist. Students are encouraged to use technology for problem-solving activities, to use technology as a tool to transfer knowledge and communicate their understandings effectively. As students move through the elementary grade levels, they are also encouraged to use the Internet responsibly as a tool for basic research.

Technology Literacy is based on the New Jersey Student Learning Standards:

- Technology Operations and Concepts: Students demonstrate a sound understanding of technology concepts, systems, and operations.
- Creativity and Innovation: Students think creatively, construct knowledge, and develop innovative products using technology.
- Communication and Collaboration: Students use digital media and environments to communicate and work collaboratively, including at a distance, to support individual learning and contribute to the learning of others.
- Digital Citizenship: Students understand human, cultural, and societal issues related to technology and practice legal and ethical behavior.
- Research and Information Fluency: Students access, retrieve, manage, and evaluate information using digital tools.
- Critical Thinking, Problem-Solving and Decision-Making: Students use critical thinking skills to plan and conduct research, manage projects, solve problems and make informed decisions using appropriate technology tools.

SOCIAL STUDIES

The fourth grade program in social studies focuses on the study of the major regions of the United States. This analysis will examine the role that geography has on shaping a region, and how the

interconnectedness of regions can shape a nation. A strong emphasis on literacy and historical context is used to support our study. Students will read primary and secondary historical accounts connected to each region and its people. The fourth grade curriculum also includes an in-depth look at the geography, history, and people of New Jersey.

The Social Studies curriculum is aligned with the 2014 New Jersey Student Learning Standards for Social Studies and the New Jersey Student Learning Standards for English Language Arts & Literacy in History/Social Studies, Science and Technical Subjects.

FLES

Foreign Language in the Elementary Schools (FLES) is a Spanish language and culture instructional program in grades 1-6. Students are given one session per week of instruction in the basics of Spanish language and cultural traditions of the world. The students are introduced to the vocabulary of the school (classroom objects, people, and places), the home (outside features, interior rooms, furniture, appliances) and foods. The speaking, listening, reading and writing activities combine new vocabulary with previously learned vocabulary.

SCIENCE

The fourth grade science program uses the Full Option Science System (FOSS) Next Generation. Students explore standards-based, inquiry centered units in life, physical, and earth science. FOSS Next Generation puts the Next Generation Science Standards into practice by integrating all three dimensions, including the disciplinary core ideas, the science and engineering practices, and the crosscutting concepts, into the science classroom in order to engage students in experiences that lead to deeper understanding of the natural and designed world.

Students in fourth grade formulate answers to questions such as: “What are waves and what are some things they can do? How can water, ice, wind and vegetation change the land? What patterns of Earth’s features can be determined with the use of maps? How do internal and external structures support the survival, growth, behavior, and reproduction of plants and animals? What is energy and how is it related to motion? How is energy transferred? How can energy be used to solve a problem? Students use a model of waves to describe patterns of waves in terms of amplitude and wavelength, and that waves can cause objects to move. Students develop an understanding of the effects of weathering or the rate of erosion by water, ice, wind, or vegetation. They apply their knowledge of natural Earth processes to generate and compare multiple solutions to reduce the impacts of such processes on humans. Fourth graders develop an understanding that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction. Students use evidence to construct an explanation of the relationship between the speed of an object and the energy of that object. Students develop an understanding that energy can be transferred from place to place by sound, light, heat, and electric currents or from object to object through collisions. They apply their understanding of energy to design, test, and refine a device that converts energy from one form to another. In order to describe patterns of Earth’s features, students analyze and interpret data from maps. By developing a model, they describe that an object can be seen when light reflected from its surface enters the eye. The crosscutting concepts of patterns; cause and effect; energy and matter; systems and system models; interdependence of science, engineering, and technology; and influence of engineering, technology, and science on society and the natural world are called out as organizing concepts for these disciplinary core ideas. Students are expected to demonstrate grade-appropriate proficiency in asking questions, developing and using models, planning and

carrying out investigations, analyzing and interpreting data, constructing explanations and designing solutions, engaging in argument from evidence, and obtaining, evaluating, and communicating information. Students are expected to use these practices to demonstrate understandings.

The fourth grade Science curriculum is aligned with the 2016 New Jersey Student Learning Standards for Science (NJSL-S).

STEM

Fourth grade students will collaborate on a number of authentic engineering, coding and design challenges that emphasize innovation, critical thinking, problem solving, and teamwork. They will define a simple design problem and identify the possible criteria and constraints. Students will then generate and compare multiple possible solutions to the problem based on how well each is likely to meet these criteria and constraints. They will then look to improve their designs by identifying and controlling variables to help identify aspects of their model or prototype that can be improved. *(3-5 ETSI Engineering Design)*

ART

In Kindergarten through sixth grade, children enjoy an ongoing and systematic art program. Using the elements of art and principles of design as a guide, students explore a wide range of materials and artistic methods. Performance tasks allow students to produce visual expressions with which to communicate their ideas, their culture and their environment, both real and imagined. Through creation, reflection and analysis, children learn to value art as a cultural institution and as a means of personal expression.

The art curriculum is aligned with the New Jersey Student Learning Standards for Visual and Performing Arts. Engaging in the four artistic processes (creating, presenting, responding and connecting,) as indicated in the National Core Art Standards, encourages all students to develop personal artistic capabilities to their greatest potential.

In fourth grade, children meet with an art specialist once a week. The fourth grade Art Class provides a variety of artistic activities in various media designed to help students master concepts and skills while creating age-appropriate artwork. As individual artistic skills grow, students will be increasingly encouraged to be more self-directed in creative decisions.

MUSIC

The K-6 music curriculum is aligned with the New Jersey Student Learning Standards for Visual and Performing Arts. Engaging in the four artistic processes (creating, performing, responding and connecting,) as indicated in the National Core Art Standards for music education, encourages all students to develop personal musical capabilities to their greatest potential.

In fourth grade, children continue to refine the singing voice, proper singing posture and breathing, and skills in singing two-part harmony. In Chorus, students increase their music reading skills by analyzing and singing from various choral octavos throughout the year. Choral literature includes art music, folk song arrangements, songs in foreign languages, songs from the theatre and music in pop and jazz styles. Children also begin experiences in sight-singing. In May, all fourth graders demonstrate their choral music growth, stage presence, and audience etiquette during the evening Spring Vocal Concert held in the New Providence High School

auditorium.

The Music Class provides a variety of musical activities designed to help students master concepts and skills. Children perform vocal/instrumental ensembles, improvise and create short compositions using various percussion instruments. They gain greater sense of rhythm and musical expression through moving and dancing to music. They develop critical and creative listening skills by listening to and analyzing selections representing numerous composers, styles, and historical eras. Students also increase their knowledge of music notation through score study. A firm understanding of musical concepts will allow each child to fully enjoy this highly expressive art form.

Fourth grade students are given the opportunity to participate in the Band or Orchestra. Though participation is not mandatory, enrollment is usually very high. The students begin their instrumental experience with “Intensive Week.” During this week, students will meet with the instrumental specialist daily. This gives the students a solid, fundamental-based start in the instrumental program. After the “Intensive Week,” students attend a forty-minute lesson once per week. These lessons are pull-outs, but are rotated in order to avoid missing the same academic period in consecutive weeks. Students also play in one band/orchestra rehearsal per week.

District Philosophy - Repertoire Selection for Concerts

Throughout the K-12 experience in the New Providence Schools, students study the historical and cultural aspects of music, representative of various cultures, to better understand the world around them. For concert performances, teachers select music that will aid in developing musical skills and expand each student’s global awareness. This repertoire may be associated with various cultural traditions, celebrations, or holidays. The selections in a single concert comprise a mere snapshot of a student’s complete educational journey.

LIBRARY AND INFORMATION SKILLS

Fourth grade students visit the library media center weekly for library and research skills instruction. The skills introduced in the third grade are expanded upon and refined by presenting the students with a wider variety of reference materials. Hands-on activities and research projects provide them with opportunities to explore and use these resources. Timeliness and relevance are discussed so that students will recognize textual and visual indications of a resource’s value. Students will distinguish between fact and opinion in print, non-print, and computer database information resources.

Students continue to select books and magazines to read for pleasure. The library media specialist presents book talks to expose the students to different literary genres and to encourage recreational reading.

As students start to use more online resources, they learn how to evaluate websites for authority and accountability.

PHYSICAL EDUCATION

Physical Education is that part of the educational process which contributes to the mental, physical, social, and emotional growth of each child through the medium of physical activity. A regular program of physical education is provided in all grades. It is the intent of the physical

education program to plan movement experiences that will strive to:

1. Develop motor skills necessary to successfully perform a variety of physical activities.
2. Develop a level of physical fitness that will enable active physical participation and enhance the learning of motor skills.
3. Develop knowledge, understanding, and the benefits from involvement in physical activity and its contributions to a healthful lifestyle.
4. Develop an awareness of social skills and socially acceptable behavior.
5. Motivate students to achieve their physical potential through a comprehensive physical education program.
6. Promote interest and proficiency in activities that will enable students to participate successfully, now, as well as in the future.

*All students must wear sneakers.

HEALTH

Health education provides knowledge, promotes positive attitudes, and teaches skills to enable students to live healthy lives. This instruction takes place in a planned, sequential, age appropriate manner and is divided into four units: wellness, integrated skills, drugs and medicine, and human relationships.

A. Wellness

- ✓ Personal Growth and Development
- ✓ Nutrition
- ✓ Diseases and Health Conditions
- ✓ Safety
- ✓ Social and Emotional Health

B. Integrated Skills

- ✓ Interpersonal Communication
- ✓ Decision Making
- ✓ Character Development
- ✓ Advocacy and Service
- ✓ Health Service and Information

C. Drugs and Medicine

- ✓ Medications
- ✓ Alcohol, Tobacco, and Other Drugs
- ✓ Dependency/Addiction
- ✓ Treatment

D. Human Relationships

- ✓ Health Relationships (family, friends, roles)
- ✓ Sexuality
- ✓ Pregnancy and Parenting

The Physical Education and Health curriculum is aligned with the New Jersey Student Learning Standards for Comprehensive Health and Physical Education.

GIFTED AND TALENTED

Enrichment education is an integral part of the New Providence School District's curricular program, including services for students identified as "gifted and talented" and for all students as an extension of the New Jersey Student Learning Standards, grades K-6. Enrichment education is an opportunity for students to expand their intellectual and creative capacities at an appropriate level commensurate with students' educational and social development and their specific abilities, talents and interests. The New Providence School District's K-6 Gifted and Talented Program is committed to identifying students who exhibit characteristics of general intellectual ability and to meet their special learning needs. Our responsibility to provide an excellent education for these children requires developing their special abilities and talents as well as addressing their social and emotional needs. In addition, the program is committed to stimulating educational opportunities which encourage each child to strive for excellence and fulfill her/his potential. The New Providence School District Gifted and Talented Services are centered on a three-tiered approach to afford flexibility to meet the varying needs, abilities and interests of students. Further information can be found on the New Providence School District website.

HOMEWORK

Homework is a planned part of the curriculum, which is intended to reinforce the school learning experience. The number, frequency, and degree of difficulty of assignments are based on ability and utilize no more of the student's time than necessary.

ELEMENTARY SCHOOLS ~ K-6

ALLEN W. ROBERTS SCHOOL	
80 Jones Drive	(908) 464-4707
Gina Hansen	Principal
Susan McGeechan	Assistant Principal
